THE MK 5 PETERSEN 250 FROM DENMARK

The well-known Danish driver Poul V. Petersen exhibited his latest Mark 5 250cc kart at the Copenhagen Racing Car Exhibition. The chassis is carefully shaped to provide flexibility where it is required but there is extra stiffness in the rear end. A practical detail is the inclusion of a tube to protect the gearbox drain plug. Rubber is used in the engine mount, rear bumper and spoiler attachments to absorb vibration.

There is a new design for the front wheel bearings and the brake disc of 144mm is moved inside the king pin to provide easier steering. The castor and camber angles are adjustable whilst any adjustments to the rear end automatically move the brake and fuel pump.

BUYERS GUIDE

This is an attempt to tabulate some of the recommended retail prices of kart frames on sale in Britain by manufacturers and importers. There are a tremendous number of variables possible in a kart specification and we can only cover the major alternatives. All karts are quoted without engine, VAT, tyres and tubes but assembled unless shown to the contrary or as a kit. Naturally all prices are negotiable with individual agents. Please keep us informed of price and specification changes.
