

C.T. & E.S.

Proudly announce their new design kart "LE SPECTRE". This kart has superior handling characteristics as displayed during the Class 100 National Championships when expertly driven by Len Jarman. Unique para-linkage braking system is fitted as standard equipment. This enables the driver to brake very late and still have complete control of kart, which maintains straight line under braking.

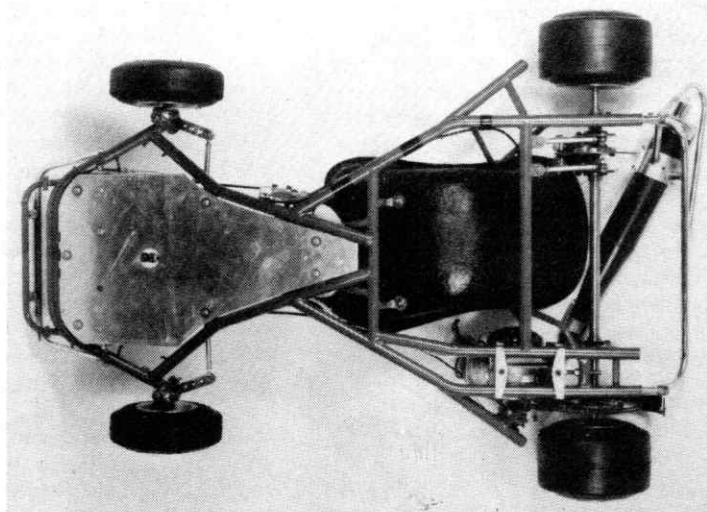

Chassis configuration was determined following transverse and torque loading calculations. Reg. design application No. 991342 was submitted to Patents Office 29th August 1979. Chassis construction carried out by expert craftsmen using CDS 10 tube. This material is both strong and durable and has withstood extensive test driving to date.

Kart is supplied with aluminium floor tray, bottle tank, leather rim steering wheel with choice of cast aluminium or magnesium wheels, hubs etc.

Colours available — Satin Black, Green, Red, Blue or to Customer requirements.
